SPLUNK

THE CHALLENGE

Upon outgrowing their previous office space, Splunk expanded their San Jose Santana Row location with over 335,00 square-foot and 8 floors of a state-of-the-art facility. Splunk wanted a facility that would accommodate growth, as their workforce is expected to grow dramatically in the coming years.
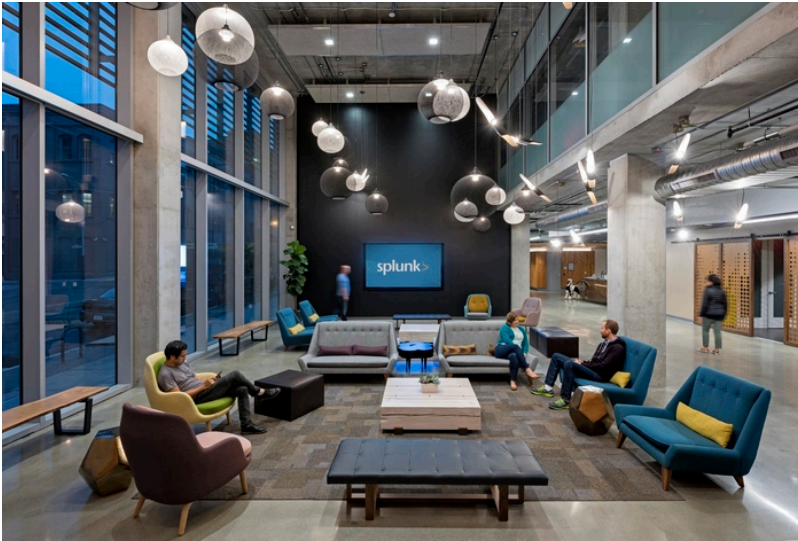

THE SOLUTION

Creation Networks provided an end-to-end Audiovisual solution throughout the new building. Within the training center, meeting spaces, huddle rooms, and executive boardrooms, Splunk utilizes Crestron UC solutions to streamline the experience within each space. The native integration with Zoom Rooms ensures that every room offers employees a simple one-touch experience. Crestron touch panels, NVX and wireless network AV technology are used to provides digital signage, scheduling, secure wired and wireless presentations throughout the building.

Using the Media Presentation System, the IT department can easily share content anywhere within the office and seamlessly switch between video sources with a touch of a button. This becomes especially useful when utilizing the LG video located in the executive boardroom. The LG LED video wall was one of the first deployed on the west coast and required a close partnership with the manufacturer to install. Close partnerships like this ensure a positive client experience and reassures the client that we will be there to support them throughout the lifespan of the product.
