

# WEIGHT WATCHERS

## THE CHALLENGE

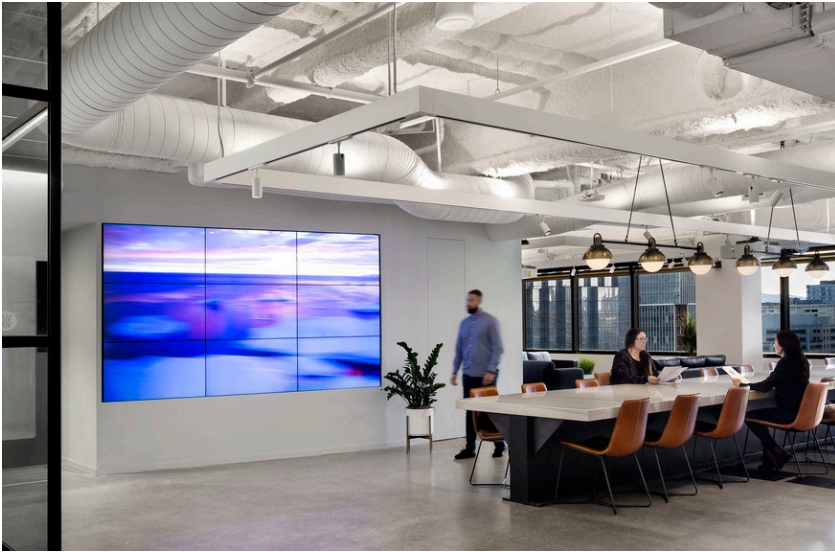

Working with design team for both the San Francisco and New York office. Weight Watchers relocated the San Francisco office with over 130 employees into a 35,000 square-foot state-of-the-art facility. Most, notably they needed a flexible all-hands space to host a wide variety of events for their staff and partners Weight Watchers wanted a facility that could accommodate growth, as their workforce is expected to grow dramatically in the coming years.

## THE SOLUTION

The Weight Watchers team was looking for intuitive solutions for every area of their workplace. In the San Francisco lobby, there is a ten foot wide LCD video wall. Zoom Rooms are standard in many conference & huddle rooms and Crestron was used for video distribution & control for presentations. Biamp, Lab Gruppen and Shure are incorporated for the audio system and Vaddio cameras and NEC projectors are used for the open space in their cafe. Room availability is controlled with Crestron room schedulers throughout the space. Flexibility and scalability were integral to this project. Creation Networks provided a rock-solid technology infrastructure that our organization can depend on both now and in the future.

## RESULTS

The new Weight Watchers San Francisco headquarters features a variety of beautifully designed meeting spaces, huddle spaces, a mezzanine which includes hoteling workstations, an impressive training facility, and an event space all powered by Crestron. Weight Watchers new technology is built to support their mission-critical applications. With Creation Networks as a trusted advisor, Weight Watchers has a secure and scalable platform that they can depend on.
