MULTILINGUAL VENUE MESSAGING

CREATION MULTILINGUAL MESSAGING

Every message your venue plays, in your guests' languages. Translated once, played forever.

HOW IT WORKS

1

WE TRANSLATE

You approve each message. Professional translators and native reviewers turn it into your guests' languages.

2

WE RECORD AND LOAD

Professional voices record every language. We load them onto your Q-SYS system.

3

IT PLAYS ITSELF

On schedule or at a button press, in the right zones, and in every language at once on guests' phones.

WHAT YOU GET

- ✓ **Professional translation and voices**, reviewed by native speakers
- ✓ **Plays by zone**, on a schedule, a button or a signal from another system
- ✓ **Every language on guests' phones** at the same moment: free ListenWIFI app, up to 500 listeners per Listen Technologies server
- ✓ **Captions on screens** (optional), matched to each message
- ✓ **No internet needed** and no per-play fees
- ✓ **Update plan**: new promotions loaded remotely
- ✓ **Monitored by CNI** and installed by CTS-D & CTS-I certified engineers

BUILT FOR

Theme parks · casinos and resorts · stadiums and arenas · convention centers · city halls and courts · campuses

MESSAGES IT HANDLES

- ✓ Promotions and sales
- ✓ Show times, hours and schedules
- ✓ Wayfinding and guest directions
- ✓ Safety directions that support your fire alarm system

Safety messages supplement, and never replace, your fire alarm or mass-notification system.

CREATION NETWORKS AV

FOR YOUR AV, IT AND OPERATIONS TEAM

HOW IT WORKS

Messages are stored on your Q-SYS processor and played through your own sound system, and every language can stream to guests' phones at the same moment. Nothing depends on the internet, and there is nothing to pay each time a message plays.

FROM SCRIPT TO SPEAKER

Your script — Written or approved by you → **Translated** — Professional, with native review → **Recorded** — Professional voice per language → **Stored on Q-SYS** — Played by zone, with priority

played to

- **Your speakers** — Zone by zone; music ducks under it
- **Guests' phones** — Every language at once, ListenWIFI app; 500 listeners per server
- **Screens (optional)** — Matching captions per language

What starts a message: a daily, weekly or monthly schedule; a page-station or touch-panel button; or a contact closure from another system, such as show control or your fire alarm system.

NETWORK AND IT

- ✓ **No internet needed** to play messages: they live on the Q-SYS processor
- ✓ Phone listening runs on your venue Wi-Fi, on the same network as the ListenWIFI server
- ✓ Caption screens are triggered over your AV network, on their own VLAN
- ✓ CNI monitoring uses the existing Q-SYS Reflect connection
- ✓ New messages are loaded remotely by CNI under the update plan
- ✓ A master copy of every message is kept in the job records

EQUIPMENT

Q-SYS processor: your existing Core, or a new one sized to your zones

Speakers and amplifiers: your existing system, or designed in

Page stations and touch panels: for messages on demand

Phone listening: Listen Technologies ListenWIFI server, up to 500 listeners each; guests use the free ListenWIFI app

Caption screens: one BrightSign player per screen, with a power outlet

You provide: your message list, languages and script approvals; we help build the list

QUALITY

Every script approved by you. Every translation reviewed by a native speaker.

SAFETY

Certified translation and your written sign-off. Supports, never replaces, your fire alarm system.

MONITORED

Status reports to Q-SYS Reflect. If something stops, CNI support is alerted.

Questions from your team? Our CTS-D & CTS-I certified engineers will walk them through it.
